Learning Plan

Jayden Hutchinson, Set-C, A01064647

My strengths for learning the course content are concise note taking as well as being able to focus for long periods of time during some of the longer lectures.Also being able to connect with my cohort and collaborate on assignments in order to understand concepts to the fullest, and get assignments done in a timely manner.

Some weaknesses I have are a long history of procrastination, trouble staying focused for long periods of time while working on assignments at home, and having a hard time paying attention when reading the textbooks.

I plan to account for these issues in a few different ways. For having trouble and procrastinating I plan to stay late after school during the week. This allows me to avoid the distractions of being at home as well as work with some of my peers to keep each other motivated to get the assignment at hand done. As for having a hard time focusing on reading. I plan to take notes alongside the reading. This will allow me to process the text in my own words and give myself a simple view of what I've read to be able to look back on when needed.

The final grade I'm expecting to get for each course that I would be happy with is if everything is at least above 80%. I think this is a reasonable goal to achieve.
In order to achieve this goal I will make sure to study the content when needed and make sure to stay up to date on assignments that are due. Even getting ahead in classes where possible. I will do this by staying after school to get help from my cohort and study in a location with the least distractions possible.

Helpful habits I will engage in are keeping up to date on what's due and making sure I have assignments done well before they are due. As well as taking notes during lectures to make sure I have all the information necessary to study for exams.

My unhelpful habits I'm going to try and break or work on are my procrastination and lack of attention span when working on assignments at home. I plan to work on these by noticing when I am doing it and making sure I don't stay persistent in allowing myself to do so. I will do this through the use of timers and setting time aside to work on assignments specifically.

I plan to use the learning hub as much as possible to make sure I'm staying on top of due dates, and aware of what needs to be done. I'm going to accompany this with the use of a spreadsheet with all my assignments on it with the due date, and the ability to mark assignments as complete when they are finished. The biggest program I plan to

focus on is the use of OneNote to keep my notes organized based on course and have everything I need in one location.

I plan to spend the days that I get out of classes early staying after school, utilizing the extra time to focus on upcoming assignments and study important topics. I hope to take advantage of the stacks in the upstairs section of the library to have a quiet, distraction free area to work in. And utilize the library as a place to collaborate with my cohort on topics that we may be struggling on. These will help me succeed by allowing me to get help where needed, as well as having a place I can stay focused and motivated to do my work.
